POPULATION PROJECTIONS FOR SOUTH CAROLINA BY COUNTY 1985, 1990, 1995, 2000

South Carolina State Data Center

July 1, 1984

The methodology used was designed to project South Carolina's population structure at ten year intervals from the base year 1980. State and County totals were determined by a shift-share process. Then birth, death and migration rates were calculated by a shift-share process. These rates were applied to the base 1980 Census population detail to obtain the preliminary projections for 1990 and 2000. These projections were benchmarked to agree with the shift-share county totals as of July 1, 1985, 1990, 1995 and 2000.

By applying the strong migration rates of the 1970's, the projections produced for 1985 and 1990 may be biased 5% above the mean estimates that would otherwise be produced. However, if the migration rates of the 1990's approach those of the 1970's, the projections presented for 1995 and 2000 return to a level of high confidence.

Please note that the notation "Black" in the following tables means all races other than "White".

RESIDENT POPULATION AS OF JULY 1

	1970	1980	1985	1990	1995	2000
